PROJECTS

Seam Carving - Data Structures And Algorithm Traditional image resizing scales every pixel uniformly — faces get squished, objects get distorted. Seam carving solves this by intelligently removing pixels that matter the least.The algorithm finds the seam with the lowest total energy . Repeat N times, and the image shrinks by N pixels while preserving important content.This is not compression — pixels are permanently deleted. The image dimensions actually change.	Mar 2026 - Apr 2026
College Fee Portal - Full Stack Project Developed a full stack academic fee payment portal that eliminates manual fee lookup and arbitrary payment entry in college fee collection.Replaced with auto-computed, category-wise fees as per college fee structure, enforced payment sequencing, and a scholarship split-payment workflow tracked end-to-end. Tech Stack : Java + Spring Boot (transactional REST APIs, JPA/Hibernate), MySQL (relational fee structure), React (dynamic dashboard), OpenPDF (receipt generation) — chosen for type-safety and enterprise grade reliability.
